

## **Activity Report**

### **Farmers Field Day**

**27 May 2014: Chimbay, Aral Sea Action Site, Central Asia**

**28 May 2014: Urgench, Aral Sea Action Site, Central Asia**

**Organized by  
CRP Dryland Systems  
International Center for Agricultural Research in the Dry Areas  
Central Asia and the Caucasus Regional Program**

**Tashkent, Uzbekistan**

## **Activity: Farmers' Field Day**

### **Action site: Aral Sea Region**

#### **Objectives:**

- Demonstrate the performance of recently released and pipeline varieties of winter wheat to the men and women farmers, seed producers, extension workers, policy makers and researchers.
- Jointly evaluate experimental lines and identify superior lines for further evaluation and release consideration.
- Observe, discuss and learn from seed production demonstration plots to produce quality seed.

#### **Delivery: (Chimbay)**

- Field day was organized in the research, demonstration and seed multiplication plots established under CRP-DS as collaborative activities among ICARDA, farmers, research institute, district administration office, and district level department of agriculture.
- The participants were welcome and addressed by the representative of the Prime Minister in the Republic of Karakalpakstan, Governor of the Chimbay district, and ICARDA representative.
- The participants were given information about the adaptive trials, varietal demonstration plots and seed production demonstration plots by national wheat research coordinator of Uzbekistan Dr. Amir Amanov and ICARDA wheat breeder Dr. Ram Sharma.
- In the first step all the participants moved together from plot to plot and discussed performance of each variety (Figure 1).
- In the second step, the participants individually evaluated relative performance of each variety and experimental line, and recorded their observations
- At the end of the half day field visit, the participants individually expressed their comments on best varieties in their evaluation, management of the experiments and demonstration plots, and their need for winter varieties in the following year.
- In particular, the farmers were impressed with the new varieties in the demonstration plots.
- Also, the farmers took special note of managing frost tolerance by planting wheat at 4 cm and not at 2-cm. The planting at 4-cm resulted in 71% varieties surviving winter frost compared to 41% under 2-cm seeding depth (Figure 2).
- The most preferred released variety was Yaksart and the most liked candidate cultivar was "KR-9829".

**Delivery: (Urgench)**

- Field day was organized in the research, demonstration and seed multiplication plots established under CRP-DS as collaborative activities among ICARDA, Khorezm Rural Advisory Support Services (KRASS), Regional Administration office, and regional department of agriculture.
- The participants were welcome by Dr. J. Rahimov (Head of the Agricultural Department of Khorezm Region) and Dr. Ram Sharma from ICARDA, Tashkent.
- The participants were given information about the adaptive trials, varietal demonstration plots and seed production demonstration plots by national wheat research coordinator of Uzbekistan Dr. Amir Amanov and ICARDA wheat breeder Dr. Ram Sharma.
- In the first step all the participants moved together from plot to plot and discussed performance of each variety (Figure 3).
- In the second step, the participants individually evaluated relative performance of each variety and experimental line, and recorded their observations
- At the end of the half day field visit, the participants individually expressed their comments on best varieties in their evaluation, management of the experiments and demonstration plots, and their need for winter varieties in the following year.
- The most preferred released variety was Yaksart and the most liked candidate cultivar was “Salinity En-49”.
- The participants also observed and evaluated chickpea trial and seed multiplication plot.

**Date and places of Farmers’ Field Day**

Date	Action Site	Crop(s)	Number of participants		
			Female	Male	Total
27 May 2014	Aral Sea (Chimbay, Karkalpakstan, Uzbekistan)	Winter wheat	0	39	39
28 May 2014	Aral Sea (Urgench, Khorezm, Uzbekistan)	Winter wheat and chickpea	2	39	41

**Outputs:**

- (i) Two farmers' field day organized on varietal evaluation and seed production of wheat.
- (ii) One farmers' field day organized on varietal evaluation and seed production of chickpea.

**Outcomes:**

- (i) Eighty participant farmers, researchers, extension workers and policy makers learned about new varieties and pipeline materials of winter wheat (Figures 4 and 5)
- (ii) Forty one participant farmers, researchers, extension workers and policy makers learned about new varieties and pipeline materials of chickpea
- (iii) Eighty farmers, researchers, seed producers and policy makers learned from demonstration of quality seed production of wheat
- (iv) Forty one farmers, researchers, seed producers and policy makers learned from demonstration of quality seed production of chickpea.

**Partners:**

- Research Institute of Crop Husbandry (KRICH), Chimbay
- Khorezm Rural Advisory Support Services (KRASS), Urgench
- Uzbek Research Institute of Plant Industry, Kibray
- District Administration, Chimbay District
- Dr. Zokhid Ziyadullaev – (then) Representative of Prime Minister of Uzbekistan to the Republic of Karakalpakstan.
